

CNS's elite DALI® solution for Niagara AX™ reduces DALI® lighting commissioning time!

Intelligent lighting systems offer huge benefits to users in terms of saving energy, maximising lamp life, improved user experience and lower cost of maintenance.

However, traditional intelligent lighting system commissioning can account for as much as 15% of the total lighting system cost! Although these costs can be recovered through the more efficient use of artificial lighting, anything that can help mitigate these is most welcome.

CNS's elite DALI solution for Niagara AX™ does just that entirely in a single web convergent environment –

- 💡 Providing automated addressing of new open standard DALI® devices
- 💡 Discovery of existing open standard DALI® devices
- 💡 Easily help identifying and resolving DALI® address conflicts
- 💡 Enables pre-configuration of DALI® system prior to site delivery
- 💡 Identifies individual lamp and ballast/inverter failures
- 💡 Enables both local and remote Emergency Inverter Function and Duration testing
- 💡 Library of proven pre-configured software lighting control components
- 💡 Product data and User Guides
- 💡 Local and remote engineering, re-configuration, control strategy updates
- 💡 Scheduling, alarming
- 💡 SMS reporting and notification

.....and much more.
