OPENING NETWORK FRONTIERS

CNS Bridging the Gap between Buildings Automation and Enterprise networks

CNS has specialised in the development of network infrastructure products and solutions for the Buildings Automation market since 1996. It has focussed upon Open Standards solutions, technologies and protocols in order to deliver solutions to its clients that are scalable, manufacturer independent and future-proof.

CNS's efforts were originally focussed upon LonWorks® based building automation network technology. It was the first company in the world to develop a cost effective LonWireless Transceiver, and among the first to recognise that LonWorks and TCP/IP technologies could be used together to deliver effective solutions to our clients.

CNS has continued to develop its specialist capabilities in the Network Infrastructure for Building Automation market and can now offer products and solutions that are not only purely LonWorks technology based, but allow this and other building network technologies to co-exist seamlessly. It also provides network infrastructure solutions spanning a wide range of media types including wire, fibre and wireless.

CNS has also recognised the powerful opportunities for its clients in being able to leverage the significant investment in Enterprise network infrastructure and allowing co-existence of Buildings Control/Monitoring data with Enterprise data without any negative impact on either system's performance or security requirements.

CNS has also identified the major opportunity for our clients to access and manipulate buildings control data with their existing Enterprise and Financial management software packages in order to manage their entire businesses and services more effectively.

CNS and its Partners can bring innovative, cost effective and value added solutions to fill the gap between buildings automation network infrastructure and Enterprise network infrastructure. Contact us to find out more.

For further information please do not hesitate to contact, Mike Welch at cns@control-network-solutions.co.uk.

About Control Network Solutions

Control Network Solutions manufactures, value-adds, sells and distributes leading technology Network Infrastructure Products for control network applications including Building, Commercial, and Transportation Automation Applications. It has shipped thousands of products enabling the connectivity of many thousands of devices over Open Standard interoperable networks based upon LonWorks®, BacNet and other Ethernet based protocols across the world.
