eLighting™ for Niagara AX™ reduces Dali lighting commissioning time!

Intelligent lighting systems offer huge benefits to users in terms of saving energy, maximising lamp life, improved user experience and more.

However, intelligent lighting system commissioning can account for as much as 15% of the total lighting system cost! Although these costs can be recovered through the more efficient use of artificial lighting, anything that can help mitigate these costs is most welcome.

eLighting for Niagara AX does just this:-

- Provides automated addressing of new Dali devices
- Can acquire addresses of existing Dali devices
- Can simply resolve Dali addressing conflicts
- Allows for lighting system pre-configuration prior to site delivery
- Identifies specific faults with individual Dali ballasts and lamps
